

Connecting to Microsoft SQL databases

During installing RheoPower package it connects automatically an Administrator and Standard Users to the Microsoft SQL databases. For their security reasons and depending your PC configurations the connection may have to do manually. There are several ways as using Transact-SQL, but here is explained the simplest way. RheoPower Lite does not use SQL databases.

You have to download (39 MB) free Microsoft SQL Server Management Studio Express (MSSMSE) 2005 program at

<http://www.microsoft.com/en-us/download/details.aspx?id=8961>

Same program is found on the RheoPower complete installing CD. Please select if you are using 64 or 32 bit version platform. After running as an Administration user MSSMSE, double click Object Explorer → Security → Logins → BUILTIN\Users or Users see picture

Select "User Mapping window" and at least in Database role membership for RheoDefault: db_datareader, db_datareader and more configurations as you want. You can also open databases for a new User by his or her name.
